JOB DESCRIPTION

TITLE

Senior Business Systems Analyst - IRI

JOB SUMMARY

The Senior Business Systems Analyst works closely with academic and business departments to understand business requirements and recommend processes to facilitate the implementation of those requirements within the Institutional Research & Improvement. Responsibilities include, business system process evaluations to properly align and incorporate appropriate technology to support accurate and efficient reporting; analyze higher education trends and challenges in student information reporting to recommend; manage and test suitable solutions to those reporting challenges; performs high level technical work in the development and production of statistical and analytical reports that support decision making functions and planning. The Position requires advanced skills with SAS and database analytics to facilitate federal and state reporting from the university’s student system and audit data for accuracy and validity. In addition, participates in and supervises systems projects by providing functional business knowledge and defining requirements, investigating technology solutions, and leading and participating in implementations. This position is responsible for independently performing responsible and confidential duties and performing non-standardized tasks requiring the employee to formulate production methods, schedules, and priorities. Work is performed under minimal supervision and performance is based upon completion of assignments and results obtained. The performance evaluation is conducted through the performance evaluation system and in accordance with the University Policies & Procedures.
